

# I Want More Eye Contact With My Patients.

## Your EHR Doesn't Have to Change Your Patient's Exam Room Experience. Professional Medical Transcription Can Help.

A recent AMA article cited physician concern that EHRs change the dynamics of the patient-doctor relationship. Why? Because many EHRs require physicians to type in patient data themselves instead of focusing their attention on the patient.

It doesn't have to be that way. With Professional Medical Transcription (PMT), physicians dictate notes instead of typing them, and PMT automatically imports transcribed notes into the EHR. It's that simple.

At PMT, we believe highly trained medical specialists shouldn't be reduced to typists. Call us today to start your free trial. For more information, contact us at:
