

There's More to my Patient's Story Than My EHR Template Lets Me Tell.

EHRs are important, but when it comes to clinical documentation they're often inadequate at capturing the context and nuances of a patient's story.

That's why many physicians prefer to dictate the qualitative information for their patient visits—like the History, Assessment and Plan. And with Mercury Transcription, those context-rich sections can be automatically sent into your EHR. Mercury Transcription partners with your EHR vendor to seamlessly insert your dictation directly into your patient's record with your EHR.

Don't let your EHR prevent you from capturing your patient's full story. Call today to start your free trial.
