"Are You Telling Me I Could've Been Dictating My Patient Notes All This Time?"

What your EHR vendor may not be telling you is that if your EHR's point-and-click charting tools or front-end voice recognition are slowing you down, there is another option: dictation and transcription. In fact, your EHR most likely has the ability to automatically upload dictated and transcribed patient notes directly into a patient chart within the EHR. This technique, called "interfacing," combines the power of your EHR with the speed and efficiency of dictation.

Studies show that one of the leading causes of physician frustration with EHRs is the extra time it takes to generate clinical documentation via templates, dropdowns, point and click boxes and a maze of other complicated on-screen windows. One physician recently testifying before a government panel called entering data into an EHR "death by keystroke."

At Accutran Medical Transcription Services, we're experts at interfacing. Our team works with your EHR vendor to automatically send your transcribed patient notes into your EHR — saving you time, money and hassle.

At AccuTran, we believe a physician's time is best spent with his or her patients, not in front of a computer screen. Call us today to start your free trial. Visit our website at **www.myaccutran.com**, or contact us at:
