

WebChartMD brought my EMR and transcription team together.

Now there's an easy and inexpensive way to tie your dictation and transcription workflow together with your EMR.

WebChartMD takes any number of in-house and outside transcription resources and seamlessly interfaces them into your EMR, PACS or RIS system.

Your providers dictate via telephone or hand-held digital recorders, and upload their audio files to WebChartMD. Transcriptionists type in their own Microsoft Word® and upload the completed documents to WebChartMD, where they can be immediately imported into your EMR. Or, use WebChartMD to edit, print, auto-fax, e-sign, and more from virtually any internet accessible computer before importing to your EMR.

With **WebChartMD**, your EMR and transcription team work beautifully together. See for yourself why WebChartMD is being called the easiest to use and most integrated solution in the industry.
