Seamless integration of EMR and transcription.

WebChartMD brought my EMR and transcription team together.

With **WebChartMD**, your EMR and transcription team work beautifully together! WebChartMD totally integrates voice capture, transcription workflow and importing documents to your EMR. Plus, WebChartMD's wide array of features—like auto-print and autofax, online document review and e-signing—add flexibility and new workflow options for Providers and support staff.

Transcriptionists love WebChartMD because it allows them to type in their own Microsoft Word, so all dictionaries and tools work just like always.

Web**Chart**MD

takes any number of in-house and outside transcription resources and seamlessly interfaces them into your EMR, PACS or RIS system.

How it works

Care providers dictate via telephone or digital recorders, and upload their audio files to WebChartMD. Transcriptionists type in their own Microsoft Word® and upload finished documents to WebChartMD, where they can be immediately imported into your EMR. Or, use WebChartMD to edit, print, auto-fax, e-sign, and more from virtually any internet accessible computer before importing to your EMR.

How will WebChartMD integrate with my EMR system?

WebChartMD uses your outbound data feed to automatically populate templates with patient demographics. Completed documents import directly into your EMR via an inbound data feed written in HL7 or any other specified format.
